

Climate Action Report: Energy Manager

Operations Policy & Planning Committee

June 8, 2020

Presented by: Chuck Morris

Climate Action

Facilities Services has identified a number of options that we are initiating to deal with the Climate Emergency.

Some options are Net Zero on new buildings, collecting energy from solar panels, heat from solar wall collectors and much more.

Climate Action

ENERGY MANAGER

- An ENERGY MANAGER will assist in identifying realistic GHG reductions over an identified period of time.
- This will include Electric and gas reductions and in some cases gas elimination because of net zero initiatives.

ENERGY MANAGER

- Lower Electricity consumption by up to 9% through staff behavior change
- Acquire external funding for energy conservation projects
- Utilizes data and formulas to identify best case scenarios for Solar Energy install, solar heat capture installs and other methods of lowering GHG emissions towards target goal

- We have been working with B.C. Hydro to acquire this Hydro supported position. They support it by providing a guaranteed percentage of the Managers salary (through contract between Hydro and the District).
- Hydro has quarterly expectations that the district must meet, all formula driven to allow the district to meet its intended goals (and Hydro's goals).
